DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Campbell (6,356,726) in view of Kida et al. (4,615,605).

Campbell teaches an electrophotographic printer comprising: a photosensitive drum on which an electrostatic latent image is formed; at least one development unit 44 to form a toner image on the photoconductive drum 18; and a pre-transfer eraser member 26 to remove charges from a non-image region of the photosensitive drum by irradiating light onto the photosensitive drum after the toner image is developed (column 2, lines 20-22; column 3, line 54 – column 4, line 28). Campbell does not teach that the pre-transfer erasing member attached to the development unit is movable to a first position to direct the irradiated light to the photosensitive

drum to perform eraser and being movable to a second position spaced apart from the photosensitive drum when the photosensitive drum unit is being mounted or dismounted.

Kida et al. teaches a development unit that moves to the first position in response to mounting of the at least one development unit within the printer and moves to the second position in response to dismounting of the development unit from the printer (figure 2; column 3, line 40 – column 4, line 52).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teaching of Kida et al. with the image forming device of Campbell to ensure protection of both image forming components when dismounting or mounting a development unit or photosensitive drum from the device (Kida et al.; column 1, lines 35-46).

Allowable Subject Matter

4. Claims 1-12 are allowed.

Prior Art of Record

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ogino et al. teaches a retractable eraser in an image forming device.

Response to Arguments

6. Applicant's arguments with respect to claims 13-14 have been considered but are moot in view of the new ground(s) of rejection.
